PRODUCT VISION & DESIGN

The vision: one configurable product suite for all clients

It will replace MTS, MBS, MCS, MDES, BSCN, ….

No more DC / Anglo

Names: Blyce2030, PSS3.0, NextGen

Capabilities => Value Streams => Product Lines

Currently: each portal has its own database, resulting in absence of single source of truth.
Vision: system of record is single source of truth. System of engagement uses configuration files, not database.
The three types of systems are technically independent but functionally belong together.
We work from inside out: Platform & configuration first.

BLYCE 2030 PSS 3.0 – STATUS

First focus: platform architecture & configuration for systems of ENGAGEMENT. Implementation: BOKA (rudimentary), IDP (off-the-shelf), UX Design System

	Platform & Configuration	Registries	Taxation, Licenses and Contribution	Benefits	Finance	Compliance	AEOI
Engagement	portal shell & design system	registration journeys	filing & assessment screens	claims journeys	payment & refund journeys	case handling UI	reporting entity portal & UX
Record	rules engine, configuration, identity	the registers themselves	assessment & crediting logic	eligibility & disbursement	sub-ledger, ledger, reconciliation	enforcement & objections	validation & delivery engine, authority tools
Insight	platform telemetry	registry data quality	tax reporting & analytics	benefits reporting	revenue reporting	risk rating & case selection	AEOI analytics & reporting

Challenge for the team: design bottom-up and simultaneously, and design for change
1. Which data driven decisions are to be made? -> 2. what data must be recorded in the core? -> 3. through what engagement will this data be obtained?

Next focus: Platform architecture and configuration for CORE

	Platform & Configuration	Registries	Taxation, Licenses and Contribution	Benefits	Finance	Compliance	AEOI
Engagement	portal shell & design system	registration journeys	filing & assessment screens	claims journeys	payment & refund journeys	case handling UI	reporting entity portal & UX
Record	rules engine, configuration, identity	the registers themselves	assessment & crediting logic	eligibility & disbursement	sub-ledger, ledger, reconciliation	enforcement & objections	validation & delivery engine, authority tools
Insight	platform telemetry	registry data quality	tax reporting & analytics	benefits reporting	revenue reporting	risk rating & case selection	AEOI analytics & reporting

Core architecture: ~~**1.0 monolith**~~ ~~**2.0 Microservices**~~ **3.0 Modulith**

Data first approach and data principles (lead by data architect)

Business architecture and UX designs for registries and benefits (collaborative effort)

(1) **Event-Driven Architecture** is something we need to seriously explore for our products. Moving to domain-driven events would allow each domain to react independently to what happens in the system, without tight coupling.

(2) The answer is not "go full microservices". Blindly breaking up a monolith into microservices without first defining the right domain boundaries leads to a distributed mess that is harder to manage than the original monolith. The key is finding the right **Modulith**
first: clear, business-driven domain boundaries with explicit contracts between them.

(3) We are already doing a lot of the right things, we just didn't know there were established patterns for them. It was reassuring to see that many of the ideas we have been working toward in MTS 2030 align with **industry-proven patterns**. We don't have to invent everything ourselves.

(4) **Asynchronous events** are not something to be afraid of. As long as we have the right mechanisms in place to guarantee that a chain of events will complete.

(5) **Observability** is an area we need to strengthen. We have some things in place like logs and integration overviews, but we are missing the deeper layers: metrics across our systems and end-to-end distributed tracing. There are plenty of tools that give us the visibility we need.

Drive towards success: each Product Mngr manages multiple product teams

	Platform & Configuration	Registries	Taxation, Licenses and Contribution	Benefits	Finance	Compliance	AEOI
Engagement	portal shell & design system	registration journeys	filing & assessment screens	claims journeys	payment & refund journeys	case handling UI	reporting entity portal & UX
Record	rules engine, configuration, identity	the registers themselves	assessment & crediting logic	eligibility & disbursement	sub-ledger, ledger, reconciliation	enforcement & objections	validation & delivery engine, authority tools
Insight	platform telemetry	registry data quality	tax reporting & analytics	benefits reporting	revenue reporting	risk rating & case selection	AEOI analytics & reporting

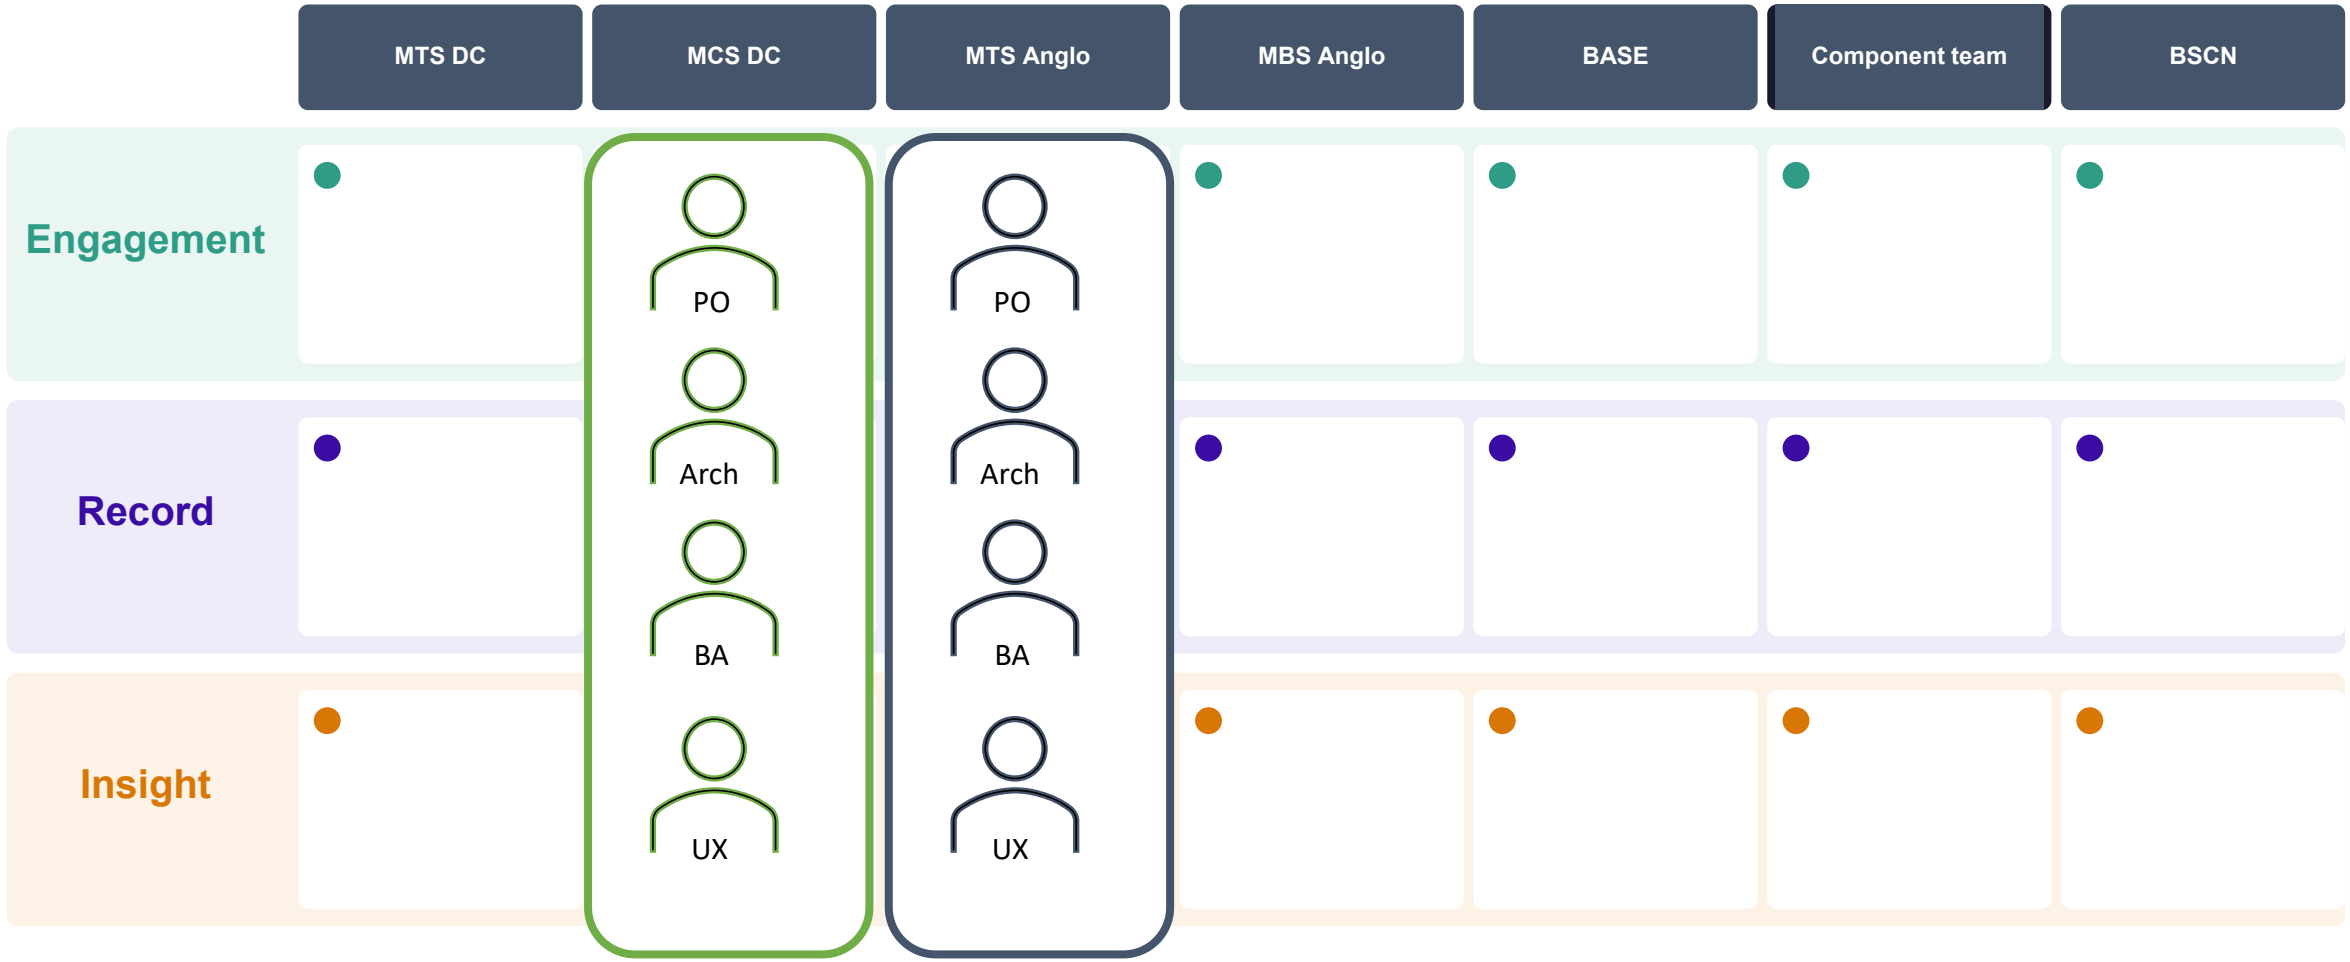

Each product team has its dedicated product owner, designers

	Platform & Configuration	Registries	Taxation, Licenses and Contribution	Benefits	Finance	Compliance	AEOI
Engagement	portal shell & design system	registration journeys	PO, Arch, BA, UX	claims journeys	payment & refund journeys	PO, Arch, BA, UX	reporting entity portal & UX
Record	rules engine, configuration, identity	the registers themselves		eligibility & disbursement	sub-ledger, ledger, reconciliation		validation & delivery engine, authority tools
Insight	platform telemetry	registry data quality		benefits reporting	revenue reporting		AEOI analytics & reporting

Instead of [PO + BA + UX] (3 roles), we aim for two of the three in each product team, when possible, e.g. [PO/BA + UX], [PO + UX/BA].

Similar set up (except one Product Mngr for all current products)

Blyce
PRODUCT VISION & DESIGN

Architecture work to be done

Architects are needed to do the following

1. **Blyce 2030 platform & configuration**
   Define technical architecture

2. **Blyce2030 dedicated product team**
   Translate functional to technical architecture

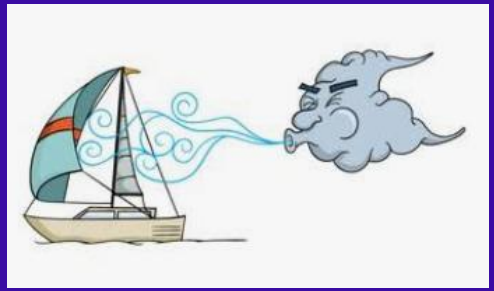

3. **Transition old -> new**
   What to uncouple; how to go from monolith and microservices to new architecture

4. **Update design of old products**
   Due to legislation changes, gaps for new clients, …

And (5) some architects are expected to serve as senior beInformed modelers.

Blyce
PRODUCT VISION & DESIGN

How can we put wind in our sails?

Ingredients for success

1 Unit Capacity to get the work done

Free up architects for architecture, assign different people on 2030 track versus current product track, fill remaining vacancies (in-house and/or new hires)

2 Architecture Retreat to make architecture decisions

When: October 7 – 9
Who: Vicky (CTO), Esmeralda (Unit Lead PVD), solution architects (6), R&D architects (3), data architect (1), security architect
Where: offsite in Curacao

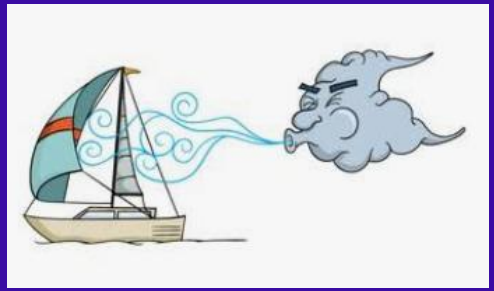

3 Quarterly Product Alignment Week

When: afternoon Netherlands, morning Americas for 5 days (total 2.5 days)
Who: Everyone who works on Blyce2030 track (Product Vision & Design unit + Product Engineering unit)
What: prevent silos, plan next quarter, identify and mitigate dependencies and risks

Process

Blyce
PRODUCT VISION & DESIGN

How can we put wind in our sails?

Ingredients for success

1 **Process Owners to incorporate WoW & standardization**

Assign process owner per discipline (BA, PO, UX, Architect, PM)

2 **Architecture Review Board**

Members: CTO + Unit Lead PVD + 1x Dev + 1x Architect + 1x Platform Engineer + 1x Security + 1x R&D

Defines architecture principles, makes architecture decisions, and enforces them.

3 **Technology Advisory Board**

Members: Unit Lead PVD + Unit Lead PE + R&D

Advices product team on completeness of input needed for a tech decision, selects right tech for the right task, and submits recommendation to CTO for approval.

Blyce
PRODUCT VISION & DESIGN

How can we put wind in our sails?

Ingredients for success

4 Proper tooling

Currently: Jira, Confluence, Excel and Powerpoint
Needed: Architecture tool, portfolio management tool (suggestions are welcome)

5 Feedback – Improvement loop

Conduct survey on the deliverables and processes of the unit
Identify and execute quality improvements

The “Puzzle”

BLYCE 2030 PSS 3.0 - PRODUCT SPECIALISTS PROPOSED ASSIGNMENT 2026/2027

Raymir

	Platform & Configuration	Registries	Taxation, Licenses and Contribution	Benefits	Finance	Compliance	AEOI
Solution Architect				Wou ter			
PO/BA							
BA/UX			Imog ene		Imog ene		
Security Architect				Luis R.			
Data Architect							

Mapping shown here has not been finalized. Please indicate if you'd like to be assigned to another product squad.
